

According to the documentation provided by our suppliers of printing inks, we declare:

- (1) Printing inks used in our flexography process are formulated and manufactured in accordance with the "EuPIA - Guide to the printing inks applied to the surface not in contact with food materials and packaging items for food" (<http://www.eupia.org>)
- (2) These inks are formulated so to minimize both the potential risk of migration through the substrate as the detachment from the outside printed surface to the surface in contact with the food on the stack or roll.
- (3) The inks we use have been produced according to Good Manufacturing Practices for the Manufacture of Printing Inks of indirect use (**surface not in contact with food**) in food packaging and articles intended to come into contact with food. ("GMP") CEPE (European Council of producers and importers of paints, printing inks and artists' colours) (<http://www.cepe.org>)
- (4) When used properly for its intended purpose, the printing inks do not place workers or consumers at risk. Are neither used, at all, toxic raw materials, nor raw materials to be carcinogenic, mutagenic or toxic for human reproduction (for more information check the EuPIA) However, printing inks are considered as dangerous goods.
- (5) According to the results of the tests carried out, the residual content of solvents is bellow 10 mg/kg and the specific migration of all the solvents is lower than 0,1 ppm (mg/kg)
- (6) The printing inks we use comply with Regulation (EC) no 1907/2006 (REACH). Nor our suppliers of printing inks, nor us, intentionally add any of the substances listed on the last SVHC list published by the ECHA (see **DEC-SHVC-EN**). Suppliers of ink manufacturers have not reported the existence of such substances in more than the 0.1% in their products.

For more information, please refer to "*EuPIA Guideline on Printing Inks applied to the non-food contact surface of food packaging materials and articles*" (<http://www.eupia.org>)
